**L**aser is one of the revolutionary technologies being implemented in the business ecosystem today. Laser cutting and welding provides a lot of authenticity and attraction in a product. Being one of the expensive technologies, laser cutting services experience the consumption of only those businesses that choose to go with it. Among the sectors that use laser cutting technologies to mould their products are automobile, computing and the clothing industry among several others. However, this technology has not been used to the optimum level in India and many countries around the world.

Aptech is one of the popular names in Metal Labels, Engraving, Fabrication, Computerized Semigraphics, Signage activities and well organized manufacturing company, providing the latest laser technology to a large customer all across the country. "We at Aptech are continually

WE OFFER OPTIMUM UTILIZATION OF RAW MATERIAL THEREBY MINIMIZING SCRAP TO ZILCH. THAT'S WHAT DISTINGUISHES US FROM THE REST

trying to spread awareness and make lasers more affordable by investing and upgrading with the latest technology. Aptech is a complete package solution for those in need of laser as well as post laser facilities such as cnc bending and welding. We offer optimum utilization of raw material thereby minimizing scrap to zilch. That's what distinguishes us from the rest," says Pritesh Shah, Founder, Aptech.

Aptech has been into laser marking on industrial labels since 2005 and over the years it has transformed into Sheet Metal Fabrication and has survived the competitive market by constant upgradation of technology. The company has been synonymous with quality and perfection from the very start. Owing to a set of skilled and experienced workforce, they are able to provide prompt response to customer queries and assist them. It is well equipped with in-house designing facilities, infrastructure with hands on the latest technology.

The highest and purest quality gases are used for cutting by Aptech which ensure a seamless manufacturing process and results in minimum wastage of raw material. Pritesh states, "If need be, we work 24x7 in three shifts to meet

deadlines of our esteemed clients. The packing is appropriately customized to avoid any damages during logistics. For the love of our work, we whole-heartedly support and offer concessional rates to upcoming architecture and engineering students who come to avail our facilities."

### Growth and the Road Ahead

Being able to invest in numerous latest machines over the years is in itself a reflection of the revenue generated by the company. However all this has been possible only because of the focused vision and foresight of founder Pritesh Shah. The sharp business acumen, sheer hard work and never say no attitude displayed by him has made the company reach new heights. Talking about the future of the company, the founder concludes, "In the next five years, we want to spread our wings and expand to other industrial areas besides the existing units in Mumbai, Navi Mumbai and Nashik. We want to invest in varied types of industrial laser technologies to become one stop solution for our clients and become the leading service provider in the field of laser cutting." ||
